MUNSCH

NEXT GENERATION

WELDING TECHNOLOGY

The time has come to rethink the plastic welding extruder. Munsch, the industry leader in plastic welding has created the MUNSCH MAX series of Extrusion welders. Design changes made with the Operator in mind. Advancements that make the extruder lighter, quieter and easier to use from any angle. Innovations that will insure a perfect weld every time. Intelligent control enables the performance data to be transferred to all your devices.

TIME FOR

BREAKTHROUGH DESIGN

-  Innovative central M-Drive control (*turn & push*) and high-resolution display
-  Integrated stand. No separate stand required.
-  Extruder is also upside down safe to guide and operate
-  Bright and even illumination of the weld seam by dual-beam LED lighting

You have never welded plastic **so easily and safely**. The ergonomic design and the intelligent control of the new MUNSCH MAX series give you the security of being able to create a perfect weld in every position and with every material.

OUTSTANDING FUNCTIONALITIES

-  Wireless connection through integrated WLAN for bidirectional data exchange with smartphone or PC
-  Wired or wireless process monitoring via App or desktop computer
-  Comprehensive evaluations as recording on integrated SD card or via WLAN to App and desktop computers
-  Quiet and energysaving standby mode
